

WALL MURAL

MEASURING & PREPARATION

MEASURING TIPS

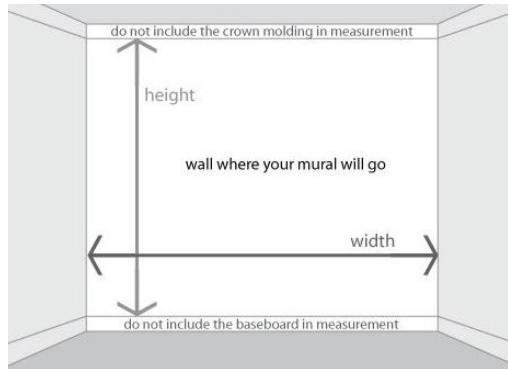

FULL-WALL

WIDTH: Measure the horizontal distance from corner to corner.

HEIGHT: Measure the vertical height at each corner (as walls are never perfectly square). If the measurements are different, use the greater of the two.

PARTIAL-WALL

Submit the exact measurements of your desired Mural.

NOTE: We create all custom-size Murals based on the specific dimensions that you provide. To allow for slightly uneven wall dimensions, we add an extra inch of bleed to the perimeter of your Mural. This extra material can be easily trimmed away after the Mural's installation is complete.

PREPARING YOUR WALL

Proper wall preparation ensures that your wall will be Mural-Ready. With proper preparation, the Mural will adhere correctly and wall defects will not damage or detract from its beauty. These steps will help ensure the best results for your Mural, and also aid in its future removal.

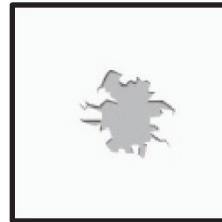

BASIC STEPS FOR WALL PREP

Remove old wall-covering.

Remove flaking paint.

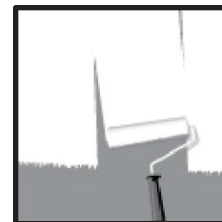

Repair any defects in the wall surface and patch any nail-holes.

Remove all picture hooks, light fixtures, switch plates, and outlet plates.

Remove old paste, grease, and dirt with a warm, mild detergent solution. Then, rinse well.

Paint wall, if necessary. The best wall surface for our Murals is a wall painted with two coats of satin or semi-gloss paint.

- Your mural can be installed over an "Orange Peel" or smoother wall surface and over walls that have been painted with color.
- We recommend that your mural only be installed on smooth surfaces.

"Orange Peel" "Knock-Down"

NEVER adhere your mural to cinder block, paneling, heavily textured wall (such as "knock down"), or a slick surface without properly prepping the wall to be Mural-Ready.

Avoid applying your mural to raw sheet-rock or concrete. You can apply your mural to a concrete wall, but the wall will first need two coats of satin or semi-gloss paint.

Once you have decided on the wall that you want to enhance with a mural, you will need to decide on what portion of it that you want to cover.

FULL - WALL

A Full-Wall Mural will offer the greatest impact and, ultimately, the best value for your money. Choosing to cover an entire wall will provide extraordinary drama and help transform a room from ho-hum to incredibly chic.

PARTIAL-WALL

A Partial-Wall Mural will add color, texture, interest, and can create a theme to your space.

WHAT SIZE ?

Our Wall Murals start at a size of 8"x10" and have no maximum size. Murals wider than 52" will be paneled and include a 1/4" overlap for easy installation.

Please contact us for information on all available stock sizes.

PREP QUESTIONS

If you have any questions about preparing your wall for installation, please give us a call, or send an email to sales@conceptonetn.com
